
OzWiz MOTELIER

FRONT OFFICE COMPUTER SOFTWARE

Version 12 System Requirements

Existing Machines

Intel Pentium II or equivalent
Windows 98 or later,
at least 500Mb hard drive free
64 Mb RAM
Minimum of 256 colours
Screen resolution of 800x600.
Strong recommendation that you install a CD burner to enable larger backups.

If you are planning on running Windows 98, it is important to restart the computer once a day, as it tends to run slow.

New Machines

Any new machine running Windows XP will be quite suitable to run version 12. However if you are buying a new machine, these are the features we recommend you look for:

Pentium IV or AMD XP Processor
Windows XP Home or Professional
20 Gb hard disk minimum
256 Mb RAM
Video card to handle 32 bit colour resolution of 800 x 600
LCD monitor capable of displaying at 800x600 resolution
CD Burner and floppy disk drive (USB floppy drives can be purchased and plugged)
Mouse and standard 101 keyboard
UPS

Due to increasing virus threats, we still recommend that the Motelier computer not be connected directly to the internet.
